COUNTLESS®

Currency and
Document
Counter/Batcher
with COUNTERFEIT
DETECTION AID

Counts up to 1200 bills,
checks or food stamps
per minute... with unparalleled
Brandt accuracy and efficiency

Brandt

SINCE 1890

INC.

Brandt's Countess 827 counts and batches fast... and watches for counterfeit currency

High-Speed Counting, Counterfeit Detection Aid plus Doubles Detection

The Brandt Countess 827 with Counterfeit Detection Aid (CDA) counts and batches currency . . . at up to 1200 bills per minute! At the same time, each bill is scanned for authenticity. When a suspected counterfeit is detected, the 827 stops immediately. The last bill in the output hopper is the suspect.

A special failsafe feature on the 827 assures the operator that the Counterfeit Detection Aid is functioning properly at all times. And by simply moving a switch, the operator can bypass the CDA to accurately and efficiently count or batch a wide range of documents.

The new, *extended stacker* makes it easier for the operator to view documents fed to the output hopper during processing.

Countess 827 counts continuously or in any batch quantity from 1 through 999. A *variable speed control* allows the operator to reduce the 827's speed when counting poor-quality documents.

There's never any need to worry about two or more documents being miscounted as one. The 827's *Doubles Detection* indicator light immediately alerts the operator if more than one item at a time has gone through.

Specifications

Size: 14½" (36.83 cm) deep, 14" (35.56 cm) wide, 20½" (52.07 cm) high

Weight: 30 pounds (13.50 kg)

Document Size: 2½" x 6" to 4" x 8"

Handsomely styled and finished in a soft Desert Tan color, Countess 827 will enhance a variety of environments — banks, retail stores, supermarkets or vending operations.

All Brandt equipment is constructed for durability and long life. Service is seldom needed, but always near at hand. Every Brandt district office maintains a complete service center backed by an extensive parts inventory.

Every Brandt machine carries a liberal guarantee. It's all part of **Brandt Systems** . . . our strong chain of products and services that provides you with an efficient, coordinated money processing system. Our nationwide team of specialists provides the links of analysis, equipment, training and service . . . to generate new profits for your operation.

Brandt® Model 873 Currency Processing System

Systems processing, keypad/command center, LED display, paper printout, self-cleaning and much, much more!

Brandt

SINCE 1890
INC.

THE GREAT ELIMINATOR

The Model 873 Currency Processing System

Virtually eliminates human error. The 873's ability to value count currency and documents removes the need for manual calculation of piece count into value count. That means a lot more speed! A lot more accuracy!

Eliminates fragmented processing. The 873's ability to key-in coin and checks enables the unified processing of each customer's receipts. And whether it's batch or continuous counting, the operator simply enters the desired function into the keypad/command center. Denomination, batch and count are all presented in an easy to read LED display.

Eliminates adding machine verification of deposits. The 873's paper tape printout produces a permanent, detailed analysis of all items deposited. It helps answer the need for on-the-spot hard copy and fast, accurate day-end balancing.

Eliminates multiple adding machine tapes and the transcription from tapes to spread sheets. The 873's Grand Total function helps say good-bye to lengthy balancing procedures.

Eliminates the worry over two or more documents being counted as one. The 873's sophisticated doubles detector system signals a true double bill condition while ignoring most dirty, taped bills. And the variable speed control lets the operator handle different document conditions swiftly and reliably.

The 873 eliminates the inefficiencies of currency processing. And in place of those inefficiencies, you'll discover more remarkable features.

Features like a new feed control that puts ease into the removal of jammed documents and makes brick currency separation a reality! And when the control is in the forward position, the 873 self-cleans!

Left handed, right handed, dual operation and statement preparation are all possible with two start/enter buttons. A new low-profiled stacker makes it easier to view documents fed to the output hopper during processing. And the attractive but durable styling and soft Desert Tan finish makes the 873 welcome in a variety of environments.

The Model 873 Currency Processing System is available with a counterfeit detection aid... just another feature of our total systems approach to document handling.

The Model 873 Currency Processing System from Brandt, Inc. When it comes to efficient currency and document handling, it's "The Great Eliminator!"
