IMPROVES PRODUCTIVITY BY REPORT GENERATION.

The Mosler Deposit Processing System collects data, sorts it by category and prints out the key reports you need daily, weekly and monthly. Its features include:

- Deposit Tracking.
- Deposit Summary.
- Account Validation.
- Currency Exception.
- Treasury Reporting.

By speeding up the reporting process and eliminating tedious, time-consuming paperwork, the Mosler System improves efficiency and raises productivity in cash vault operations.

Monthly teller reports by average number of pieces processed give managers yet another measure of productivity.

IMPROVES PROFITABILITY IN SERVICE PRICING.

The Mosler System reports the number of deposits and the number of pieces by account number and customer name.

These reports show cash-vault managers which accounts take the most time, valuable data for pricing vault services fairly—and profitably.

A more accurate picture of the teller work load and the vault's work flow helps managers schedule people more efficiently, another boost for profitability.

IT'S A SIMPLE, ECONOMICAL PC-BASED SYSTEM DESIGNED TO WORK WITH THE MOSLER CS6600.

The Mosler Deposit Processing System takes its input data directly from a Mosler CS6600 Currency Handler. All you need to add is our software package, a PC with hard-disk drive and a printer.

You needn't connect with the main-frame computer (although you may). And you needn't invest in an expensive mini-computer to gain the benefits of Mosler Deposit Processing.

GENERATES 10 MOST USED REPORTS, PLUS WHATEVER ELSE YOU NEED.

The Mosler Deposit Processing System generates five daily, one weekly, two monthly and two file-maintenance reports. They include:

- Daily Activity by Account Number.
- Daily Activity by Teller Number.
- Difference Report by Account Number.
- Over Transaction Limit by Tax ID Number.
- Daily Cash Processed by Denomination.

- Weekly Deposit Summary by Account Number.
- Monthly Deposit Summary by Account Number.
- Monthly Teller Summary by Pieces Processed.
- Customer Listing.
- Teller Listing.

But that's not all. Because the Mosler System uses the powerful dBase III Plus*, it's totally flexible. You can establish your own inputs and design your own reporting format—whatever *your* cash vault operation needs.

MOSLER CAN PROVIDE A TURN-KEY INSTALLATION.

That includes the Mosler Deposit Processing System software, operator training and all the hardware: PC with hard-disk drive, printer and interface with your Mosler CS6600 Currency Handler.

If you would like to know more about the Mosler CS6600 and the Mosler Deposit Processing System, call us at 1-800-543-4584.
